

ACIDOS Y MINERALES DE VENEZUELA, C.A.

Puerto Ordaz, January 28, 2012

Sirs
Prevor Ltd.
France

Atn.: Christelle Nobecourt
Ref.: Diphoterine use

Dear Miss Nobecourt:

In mid-December of 2011, we started up our new sulfuric acid plant, the first in southern Venezuela, with the assistance of the designers and a startup team from Brazil. For use in case of emergency we had a stock of Micro Dap sprays and eye washing solution.

In the activities involved with our successful startup we had three situations where our operations personnel came in involuntary contact with sulfuric acid, including a possible burn when removing a glove and a drop in the scalp when a test tube was dropped. All situations were immediately treated with the Diphoterine spray.

The results of the application of the Diphoterine spray were excellent as both operators and the chemical engineer involved in the incidents had, after a few days, no visible mark on their skins.

We wish to congratulate your company on this excellent product and will continue to have Diphoterine ready for any emergency.

Yours Sincerely,

Leandro D. Casás
Vice-president
