

## Translation of a testimony from Habitation Trianon

(Martinique, 2012)

### **Habitation Trianon**

#### Accident report

#### ***Saint-Aimé Thierry, Chief Operating Officer***

What follows briefly summarizes an accident that occurred in our packing station. Indeed Friday 28<sup>th</sup> of September 2012, the employee responsible for the chore was victim of a chemical splash in the left eye with a basic corrosive product diluted at 10%. This did not prevent severe pain, valued by the victim herself at 7 on a scale from 1 to 10.

Fortunately in our intervention equipment, we have an active decontamination solution for this type of accident, "**The DIPHOTERINE® solution**" which allowed us to avoid the worst, both to the victim who lamented no serious injury so far and therefore does not require secondary care, than to me who would have had to face a work loss.

Thanks to "**the DIPHOTERINE® solution**", severe ocular and cutaneous injuries caused by this type of product were avoided.

I congratulate myself for having taken the right decision before the irreparable happened, "the loss of an eye".

This product proved to me its effectiveness and was of a great help.
